### **World Micro Achieves AS9120 Certification**

**Atlanta, GA, April 1, 2009** – World Micro is proud to announce that along with our annual ISO 9001:2000 audit, we have been awarded AS9120 certification status. Our combined reissue of certificate #12406 was official on March 18, 2009.

“We believe this additional certification will open opportunities in markets that previously were not available,” said Art Ogg, World Micro’s Quality Manager. Ogg continued, “To succeed in this competitive and cyclical market, World Micro sought this certification to further exhibit our commitment to quality and excellence. Demonstrably, Phase II of the audit process was completed on March 11, 2009, with World Micro receiving a perfect 100%. Our auditor called World Micro “one of the best small companies he has audited.”

World Micro’s VP, Chris Ellsworth stated, “This marks an important step that not only shows our dedication to the aerospace industry, but also signifies our overall commitment to quality”.

AS9120 Quality Management System was developed for pass-through distributors of aerospace commodity items. While based on ISO 9001:2000, AS9120 includes nearly 100 additional requirements specific to aerospace distributors, and provides suppliers with a comprehensive quality system focused on areas directly impacting product safety and reliability.

###
